**FOR IMMEDIATE RELEASE**

May 11, 2009

## **New Micro-Needle Skin Therapy with Less Risk of PIH, No Downtime Enhance Ingredient Absorption, Encourage Renewal with BENEV SkinStamp VMT**

**Mission Viejo, CA**— Now medical skin specialists and their patients have a new choice in micro-needle transdermal therapy that creates less potential for post-inflammatory hyperpigmentation and no downtime while still offering great skin rejuvenation results. BENEV Company Inc., an FDA-licensed pharmaceutical manufacturer, introduces a simple new approach to micro-needle skin procedures, **SkinStamp Vertical Micro-Needle Therapy (VMT)**.

This hand-held Class I medical device causes less pain, less bleeding, and reduced risk of post-inflammatory hyperpigmentation compared to other similar devices. It is an effective delivery system for topical skin solutions, creating temporary micro-channels with micro-fine stainless steel needles (0.8 mm length) for ingredients to travel through to deeper layers. It is excellent for all skin types, including Asian and Latin skin, and can even be used on active acne to promote increased oxygen to clogged pores. The mild controlled wound created with the BENEV SkinStamp VMT encourages skin renewal for a healthier looking, more youthful complexion.

Unlike dermal rollers, which penetrate the skin at wide, varying angles, leading to stretching and pulling as the device rolls across the skin, SkinStamp penetrates straight into the skin without stretching or pulling. This reduces bleeding, downtime, and the risk of adverse reactions, such as post-inflammatory pigmentation, on ethnic and sensitive skin types.

SkinStamp is a great treatment to incorporate into patient strategies as preparation, between-treatment results enhancement, and maintenance procedures. For optimal results, the BENEV SkinStamp VMT should be used with BENEV GF Rejuvenating, GF Brightening, or GF Body Care Complex.

Clinical Use Only.

### **About BENEV Company, Inc.**
